

Lightweight framed formwork VARIMID

Tried and tested system designed for forming where use of a crane is limited.

The lightweight framed formwork Varimid by SALESBRIDGES is a complete system including accessories, which delivers perfect forming performance on construction sites with limited use of a crane. High load-bearing capacity and long service life of the Varimid system makes it an cost-effective solution.

High load-bearing capacity:

- 60 kN/m² pressure of fresh concrete up to 3.00m
- Can be vertically stacked up to 6.00m with use of one joint.
- High quality film faced plywood with thickness of 15mm. Film weight 240g/m²

Cost-effective

- Manhandled formwork panels minimize use of a crane.
- High number of use cycles means lower follow-up expenses.
- Reduction of expenses by means of restoration and cleaning possibilities.
- Galvanized or powder-coated steel frames, for long service life.
- High quality of concrete surface minimizes finishing work.

Easy handling and planning

- All the connectors and accessories are easily fixed into the slots and quickly tighten, consequently forming time is efficient and maximized.
- The ingeniously coordinated panel widths permit optimum adaptation to any structure

Safe use

- Accessories such as — lifting hooks, wall brackets, supporting struts etc. make for save and easier handling of the system.

Areas of use of the Varimid system:

- Wall formwork
- Column formwork
- Foundation formwork

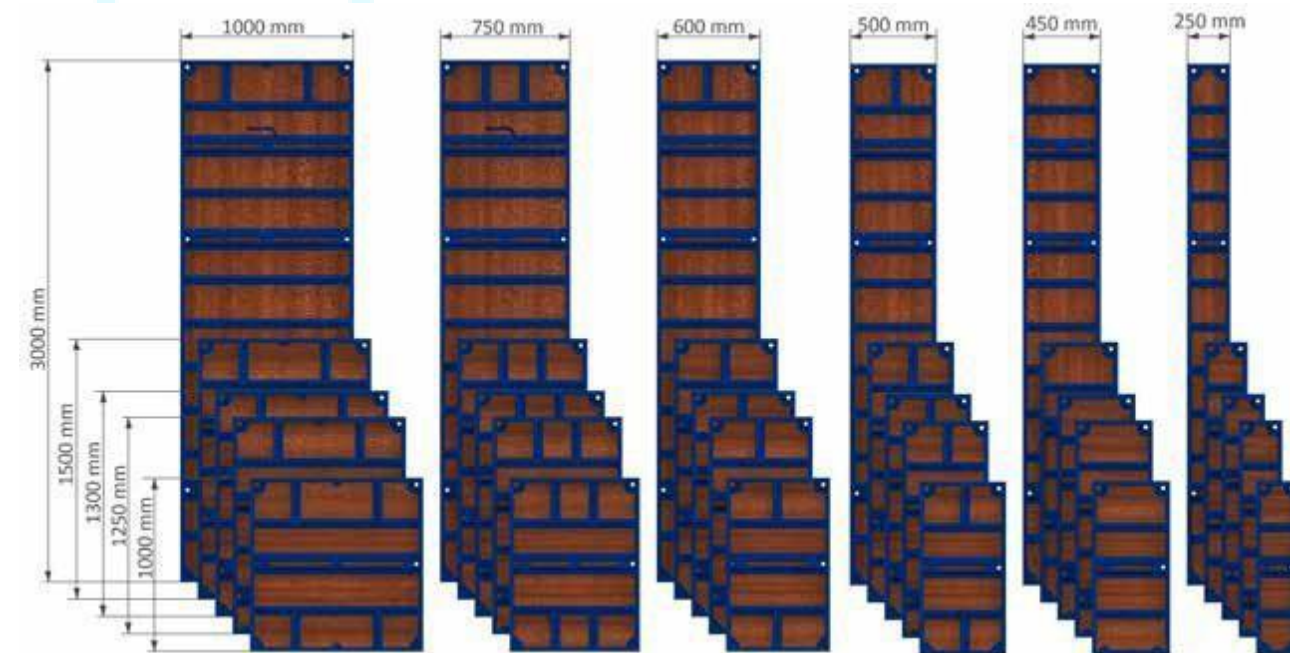

VARIMID panels

The heights and widths of the Varimid panels result in a logical and advantageous increment-grid. Small amount of different panels' sizes makes planning easier and forming faster.

- 8 widths of panel
- 4 heights of panel

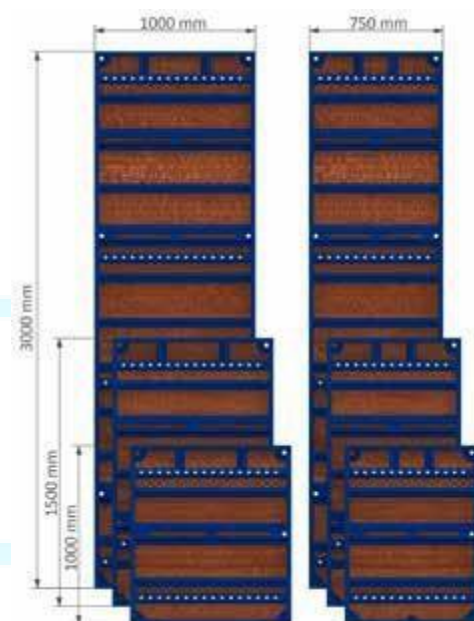

STANDARD PANELS

VERSATILE PANELS

The special hole pattern makes these panels particularly suitable for efficient forming of:

- Corners
- Wall junctions
- Stop-ends
- Columns

MODULE PANELS

For any type and size of the panel two options of covering are available.

Galvanized

Powder-coated

STRIPPING CORNER

The Varimid stripping corner was specifically designed for use with shaft formwork. It enables the formwork to be closed and opened in accordance with accident protection regulations, i.e. without using the crane, simply by operating easy-to-turn spindles with a reinforcement rod or the convenient ratchet. It is then lifted and reset in one piece, thus saving crane-time. The Varimid stripping corner is also suitable for use on pilasters and as an inside corner on wall formwork.

JOINING

Thanks to a continuous slot placed all along the panel's profile, the Varimid clamp device can be installed in any desired point, simply with a blow of the hammer. This makes assembly super-fast and no special tools required.

CLOSURES

Closures are intended to be used for places where formwork cannot be struck easily. Filled with construction timber, tighten with use of an adjustable clamp device.
